# Subject Index

affinity membranes, 21
alkali metal ions, 175
alumina, 167
amino acids, 221
asymmetric membrane, 301

backwash, 129
biotechnology, 21
bis(2-ethylhexyl)phosphoric acid, 175
blend membranes, 81
BSA adsorption, 21

carbon, 253
catalytic membrane, 291
catalytic transport, 13
cellulose triacetate membranes, 71
chemical vapor deposition, 279
chiral discrimination, 221
cobalt, 157
competitive permeation, 157
composite membranes, 29, 59
computer simulations, 139
concentrated emulsion polymerization, 59
concentration polarization, 111, 139, 241
crossflow, 139
crown ether, 175
cyanoethyl cellulose acetate, 1

dehydrogenation, 229
desalination, 241
di(2-ethylhexyl)phosphoric acid, 157
diol groups, 21

electrical conductivity, 183
electrotransport, 195
equilibrium properties, 183
esterification, 291
ethylbenzene, 229

facilitated transport, 89, 99
fiber membranes, 265
filtration, 129
fouling, 39

gas permeation, 279
gas separations, 29, 253

hindered transport, 39
hollow fiber, 241
hollow fiber membranes, 129
hydrochloric acid, 183, 195
hydrogen, 29
hydrogen separation, 279
hydroxypropyl cellulose acetate, 1

inorganic membranes, 167, 253
intrinsic kinetics, 229
ion–dipole interaction, 13

kinetics, 195
$k$–$\epsilon$ turbulence model, 139

lactic acid, 205
liquid chromatography, 1

mass transfer correlations, 265
mass transfer model, 205
membrane preparation and structure, 21, 301
membrane reactor, 291
membrane separation, 241
metal alkoxide, 167
metal membranes, 29
methyl methacrylate, 71
microfiltration, 21, 71
microporous and porous membranes, 253, 265
mixed carrier, 175
modules, 265
molecular weight distribution, 71

Nafion, 291
Nafion membranes, 89, 99
nanofiltration, 205
nickel, 157

organic separations, 301

palladium membrane, 229
pervaporation, 13, 59, 81, 291, 301
phase inversion membrane, 301
polyacrylonitrile, 129
poly(acrylonitrile-*co*-acrylic acid), 81
poly(acrylonitrile-*co*-vinyl pyridine), 81
polymer particles, 1
poly(4-vinylpyridine-*co*-acrylonitrile), 13

pore plugging, 39
porogen, 59
protein separation, 39
protein transmission, 111

radiation-induced graft polymerization, 21, 71
radiotracers, 183, 195
rejection, 205
reversed micelles, 167
reverse osmosis, 1, 205, 241

self-diffusion flux, 183
separation of ethene/ethane, 89, 99
separation of water/acetic acid mixtures, 13
separation of water/alcohol, 59
silica membranes, 279
skin layer, 129
sol-gel method, 167
solution-diffusion model, 241
sorption, Fe, 21
sorption capacity, 59
styrene, 229
supported liquid membranes, 157, 221
surfactant, 167

tannin, 21
tetraethylorthosilicate, 279
transmembrane pressure pulsing, 39
transport, 175
transport equations, 111

ultrafiltration, 39, 111, 139
ultrafine particles, 167
unidirectional flux, 195

vortex flow filtration unit, 111
zirconia, 167
